- Flow Control Structures (Conditionals and loops)
- Functional Programming

Variable life cycle

commet in js

Create three variables with
var (X & Y & Z)
and output Z
consider that z = x + y ;

Variable naming rules

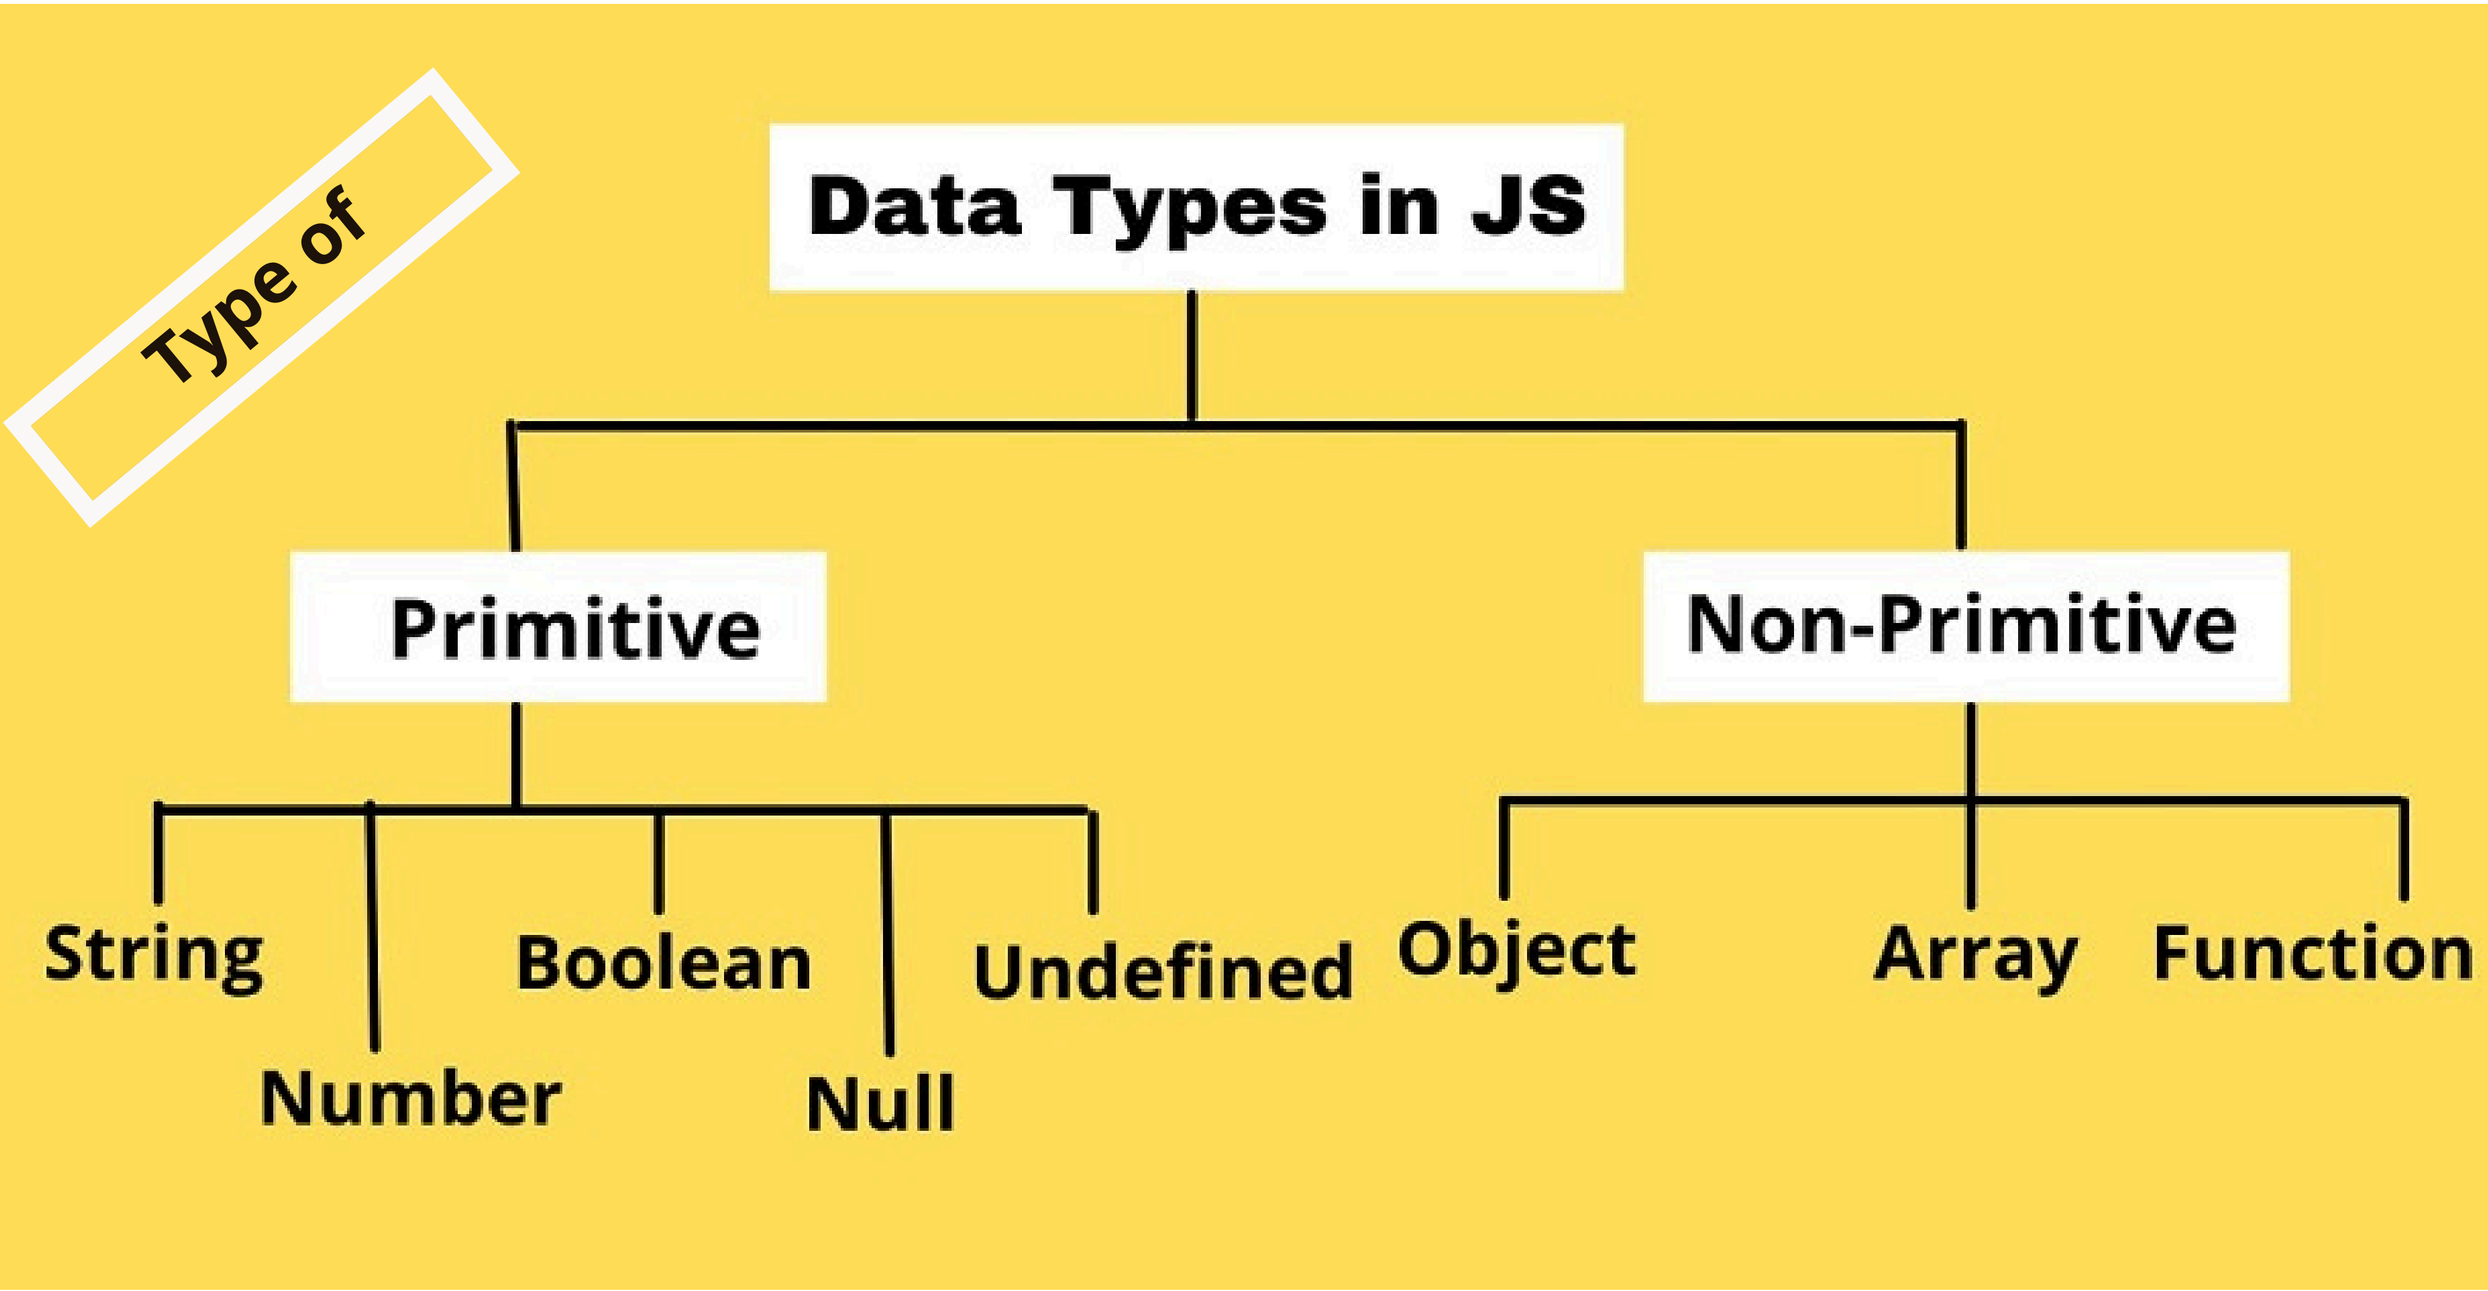

Rules and Best Practices

- Start with (letter) OR（ _ ）OR（ $ ）
- NOTE : Js is case senstive
- There's no limit to the length of the variable name.
- camelCase AND PascalCase AND snake_case

Don't do this

- Start with number
- Start with symbols
- Kebab case
- Spaces
- reserved word

Type of
Data Types in JS
Primitive
Non-Primitive
String
Number
Boolean
Null
Undefined
Object
Array
Function

Primitive

- String
- Number
- Boolean
- undefined
- Null

- string concatination …. (task)
- Number get from user …. (task)

Create two prompts and get from user first name and last name then output the full name

Create two prompts and get from user His name and age and convert it into days
